“Our methods result in a system that is fast and reliable. Our solutions are battle tested and include capabilities such as instant recovery from data corruption and loss even in the event of server crash!”

S7 Provides Fast, Reliable--Proven Results

For technical readers, you'll appreciate how our migration tools and services virtually eliminate the hard work that has traditionally discouraged many companies from moving their proven applications and data from their tired and outdated hardware to the latest technologies.

Here is a sampling of the technologies we have developed to ease migrations:

- **Direct Data Move from Ultimate** to your choice of database with load times that allow for quick switchover from your old system (quick switchover to new system that can be performed during normal maintenance window with no operational impact).

- **Advanced code-check in** allows your programmers to keep working to change code, reports, etc while we are preparing your new system for go-live. (Don't have to freeze code while we are preparing to go-live).

- **Advanced Data roll-back on new system.** This allows you to test your applications on the new system and compare results side-by-side with your existing system. You can run end-of-month, check results, and then roll-back the system to pre end-of-month state within minutes and do it again and again until you are satisfied that the new system is exactly right.

We have developed a **high-performance interface to the Activant catalog**. So, if you are an Activant catalog lover, you can keep your catalog and move to the latest technology! Of course, we also offer interfaces to **Wrenchhead** too! We have spooler tools that allow you to setup your printers as advanced network printers.

We have terminal utilities that allow you to operate in a modern telnet or SSH environment with your existing applications.

Guarantees and Trade-in Programs

S7 is offering excellent trade-ins for existing Ultimate users can lower costs by over 50%!

Our tools and utilities also allow you to run background users and printers without paying license fees to further reduce licensing costs.

And when the migrate is complete, the only thing your users will notice is that the system is much much faster and more reliable. Because you continue to run your existing applications, the end-users don't know that they have moved to a new system (other than speed). No user retraining means that your staff is instantly productive on the new system. At the same time, your managers and executives will now be able to integrate their spreadsheets and reporting tools directly into your data to gain real-time insight into your operations.

Truly, our solutions will bring your applications to the state-of-the-art for a fraction of the price of an application replacement.

You owe it to yourself to contact us for a free system review and budgetary proposal.
