

# INFORMIX Users can now Deploy 4GL Functions WITHOUT REWRITING ANY SOURCE CODE

## INTRODUCING INFORMIX I4GL

Through Service-Oriented Architecture (SOA) and Web Services, INFORMIX I4GL supports a programming language for interacting with database servers.

It provides a rich environment for the easy development of relational data base applications.

### Architecture of I4GL SOA

Business logic is maintained in INFORMIX I4GL, and made available to a variety of clients through Web services.

**“This is great news for 4GL Users. STRATEGY 7 specializes in integrating INFORMIX legacy systems with web and enterprise application programs.”**

Joe Rodriguez  
--Co-Founder & President/S7--

## INFORMIX I4GL and the SOA ADVANTAGE

Many INFORMIX customers continue to use I4GL's rich language support and have large applications, which contain the user interface and business logic on I4GL. Migrating these applications to newer technologies requires a substantial investment of time and resources. Instead of migrating or re-writing the I4GL existing logic, a better solution is to re-use the I4GL applications as Web services.

### BENEFITS

- **Re-use existing version 7.32 I4GL business logic in a wider set of applications within and outside an organization**
- **Avoid having to migrate existing I4GL applications to newer technologies**
- **Access browser-based applications and other clients**
- **Leverage applications written in other languages**

**I4GL 7.50.xC2** allows you to deploy your I4GL functions on the Web without rewriting any source code. These Web services can be used by, for example, Java and .Net applications on the Web without you doing any Java or .NET programming. Your business logic is maintained in I4GL, and made available to a variety of Web clients by the Web services.

**I4GL 7.50.xC3** enables you to subscribe to Web services written in I4GL or any modern programming language. The product contains sample demonstrations on how to publish an I4GL Web service and how to subscribe to an I4GL Web service using an I4GL subscriber.

## STRATEGY 7 and INFORMIX I4GL

With more than three decades of combined multi-value and relational database experience, S7's INFORMIX technical consultants specialize in integrating legacy systems with web and enterprise application programs.

Our expertise and industry best practices maximize the strength of the data integration and implementation process--providing our customers with the confidence of knowing that they have a solid partner working on their behalf.
